Continuation Sheet (PTO-303)

Continuation of 3. NOTE: The markush language added to claim 10 cannot use "or" prior to the last member. "and" must be used with "selected from the group" (MPEP2173.05(h))

The filler required by ammended claim 23 is new issue.

The "anaerobic environment" language is new issue and probably unecessary/confusing as only compositions - not bonded substrates or process of bonding substrates are being claimed.

Continuation of 11. does NOT place the application in condition for allowance because: Response is improper because the nonelected claims were not cancelled and the Sugio rejection was not traversed.

Applicant argues Ikeguchi and Gaku lack the anaerobic cure inducing component (d). This is not convincing because both references suggest the inclusion of peroxides. Peroxides apparently qualify as applicant's (d) in view of paragraph 56 and table I. The examiner uses "apparently" because applicant NEVER defined what the minimum requirements are to meet "anaerobic cure inducing component (d). Is saccharin required to be present along with peroxide to qualify as (d)?.

Applicant argues other US patents have the term "anaerobic cure inducing component" in their claims and therefore must be an acceptable term. This is not convincing. This examiner is not permitted to comment on the validity/sufficiency of disclosure of other patents. In the instant application, the meaning of (d) is critical because it is the only possible difference between the applied prior art and the instant claims.

The prior art need not recognize the inherent ability of their compositions to cure in the manner recited by applicant's "future intended use" (MPEP 2112). The references have all the ingredients called for by applicant's claims. Applicant has given no rational explanation how the references can use the same ingredients as applicant but fail to have the ability to cure in the manner intended by applicant.
